

What success looks like to me?

- Success to me is like a multi-dimensional stream that bleeds among the others; my well-being, healthy psychological state, social balance and financial freedom. I see success as a grouping of all the mentioned points coming together to achieve your set goals and targets. After failing in reaching your set goals, you need to regroup, breathe and set new strategies and go back to the battlefield, in doing so success is highly achievable. As a university dropout, I managed to go register at Boston Campus and finished my diploma in Systems Development all in record time, I even obtained Cum Laude pass. The reason was because my prior game plans were somehow erroneous. I never gave up because I knew exactly what I wanted. That in all to me is success.

Key Learning Objectives?

- I am interested to further my Java and web development skills. Therefore the FULLSTACK program is the ideal choice for me.

Why this program?

- I chose this program because firstly, I believe in the Deviare team and its full-featured programs. In light of that, I experienced a great learning journey with them through the Python Training last year.
Secondly, as a Systems Development graduate, it is quite hard to land a job with the 0 years' experience and given the Covid 19 pandemic, fewer job opportunities are experienced. I feel like having a diploma/degree alone is not enough in the IT sector, you ought to have a set of specific certification to increase your chances of landing a job.
